LESTECH

ST

Tanks of the ST series are used as containers of liquids for firefighting or other emergency events. Tanks serve as the source of water for portable high-pressure pumps or for our firefighting backpacks. Tanks can be used as sawer catch basins in the case of the leaks of hazardous substances. Tanks serve as storage of contaminated water from decontamination tent.

Tanks of the ST series are unique in their design. Tanks consist of their own self-supporting body and the neck which closes the whole tank. Therefore tanks can be transported closed and filled with liquids. Tanks are equipped with handles for easy manipulation. The shape, size and material ensure the maximum saving of space.

Tanks of the ST series are made of PVC coated polyester fabric. The manufacturer of the fabric guarantees its resistance to UV radiation, rot and mould. Tanks can be equipped with ball valves D, C or their combination. The valves can be ended by couplings. Tanks can be equipped with an air release valve. For using in hard terrain tanks are equipped with rope holders for fixing against rocks in the pick-ups or in the forest on the slope. Tanks of the ST series are equipped with the transport bag and the protected pad. The volume of the supplied tanks is 100, 300, 600, 1000, 1500 litres..

Specification

	100	300	600	1000	1500
Volume [l]	100	300	600	1000	1500
Weight [kg]	2.3	4.0	6.3	8.6	10.4
Diameter of the base [mm]	700	1040	1260	1620	1900
Height [mm]	517	731	848	850	900
Working temperature [°C]	-40 až +70				

Advantages

Closing neck

Tanks are equipped with a closing neck, which serves as the shut-off after filling the tank with a liquid. This enables to carry full tanks without leaking a liquid.

Design

Tanks are self-supporting. The filled tanks keep their shape all the time and therefore they don't need any mechanical structure.

Protective pad

All tanks have protective pad which protects the tanks against possible damages in the hard terrain.

Handles

Tanks are equipped with large handles, enabling to carry full tanks (100 and 300l). Under each handle is a rope holder, thanks to which the tanks can be fixed on the bed of a pick-up or in the forest on a slope.

Fittings

Tanks can be equipped with one, two or three D25 or C52 ball valves with Storz couplings or their combination.

Transport bag

All tanks are equipped with transport bag where they can be carried and stored.

WE ARE MANUFACTURER!

Made in EU

All our products are made in Czech Republic, in our workshop and with our hands.

10

Tradition

We have more than 10 years experiences in manufacturing of the firefighting equipment.

Service

As manufacturer we provide warranty and post-warranty service including the supply of spare parts.
